

Phormium cookianum Black Adder^{PBR}

'Black Adder' is a fantastic deep burgundy coloured Phormium. It is easy to grow and tolerates the most exposed locations without affecting growth or ornamental appeal.

'Black Adder' is ideal for containers and borders where a striking feature plant is required to set off lighter coloured plants or ornamental containers. 'Black Adder' is also drought tolerant making it ideal for containers. As it matures, it forms an elegant semi upright mound of approximately 1.5m when planted in rich well fertilized soils. The glossy dark foliage becomes pendulous at the tips.

The plant will tolerate a very wide range of soils from heavy to light sandy soils. 'Black Adder' is quite cold tolerant, but needs protection if grown in areas with temperatures below -7°C .

FOR GARDEN AND PATIO

- * Strong bold purple foliage
- * Easy cultivation requirements
- * Suitable for a wide range of applications

For decoration purposes only, not fit for consumption.

Phormium cookianum Black AdderTM is Europees kwekersrechtelijk beschermd onder nr. EU 20071361.
